SUMMARY

Computer Science Graduate and backend developer with hands-on experience building RESTful APIs and secure server-side applications using Node.js and Express.js. Experienced in JWT-based authentication, database design, and API integrations. Currently exploring backend development in Go (Golang) with a focus on concurrency and performance, along with integrating AI services such as LLM APIs.

INTERNSHIP EXPERIENCE

Backend Developer Intern (Jun 2025 - Aug 2025)
Company : Cybrom technology Pvt Ltd.
Location : MP Nagar, Bhopal

- Developed and maintained **RESTful APIs** for multiple modules including data retrieval, validation, and structured error handling.
- Implemented **JWT**-based **authentication** and **protected routes** to secure API access.
- Integrated backend endpoints and verified request/response cycles using **Postman** and proper **HTTP status codes**.

SKILLS

Backend: Node.js, Express.js, Go (GoLang), REST API, Authentication & Authorization (JWT)
Databases: MongoDB, MySQL, SQL Server, Schema Design
Languages: JavaScript, Python, SQL, Go (Golang)
Frontend: HTML, CSS, React.js, Tailwind CSS
Tools & Technologies: Git, GitHub, Postman, API Integration, SDLC, LLM, LangChain
Core CS: Data Structures & Algorithms (DSA), Problem Solving

PROJECTS

Sabjiwala – Daily Inventory Vegetable Ordering System (https://github.com/Baiju2005/SubjiWala)

- Designed and developed a **RESTful backend** system for a daily inventory ordering platform.
- Implemented user registration, login, and order placement with **JWT authentication** and **bcrypt** password hashing.
- Created **MongoDB schemas** for users, inventory, and orders with dynamic day-wise stock handling.
- Built admin APIs for updating inventory and tracking orders with proper **authorization** and validation.
- Managed HTTP request lifecycle including error handling, **status codes**, and protected routes.

Cartivo– E-commerce web app (https://cartivo-azure.vercel.app/)

- Built a backend service in **Go** using **net/http** for managing vlog posts.
- Implemented secure **JWT authentication** and password hashing with **bcrypt**, along with middleware-based protected routes and proper HTTP status handling.
- Developed full CRUD operations with **MySQL** database integration and JSON-based API responses.
- Added authorization checks ensuring only content owners can update or delete posts.

PyBuddy a LMS system (https://pybuddy-lilac.vercel.app/)

- Built a modern, responsive e-commerce frontend using React, Tailwind CSS, and Context API with a clean, reusable component architecture.
- Fetched and managed product data from Fake APIs using useEffect, enabling global state sharing and real-time UI updates.
- Implemented product filtering, cart functionality, dynamic routing, and enhanced UX with loaders, toast notifications, empty-cart states, and mobile navigation.

EDUCATION

- B.Tech in Computer Science & Engineering (RGPV Bhopal)
- Frontend Development certification course (Sheryians coding school)

ACHIEVEMENTS

- Certified frontend developer (React) [www.hackerrank.com/certificates/f7ab341f6c23]
- Solved multiple algorithmic problems demonstrating strong foundation on language (HackerRank 3★ Python)
- Solved SQL query challenges demonstrating database and query optimization skills (HackerRank 3★ SQL)
